› High biofunctionality 5-10

› These natural biomaterials were evaluated in more than 1,400 studies from countries all over the world.
› The safety has been assessed by international and national authorities.

Exposed tooth root before treatment.

Completely covered tooth root with Geistlich Mucograft® 3 months after surgery.

Dr. McGuire & Dr. Scheyer (Houston, USA)
What happens with exposed tooth roots?

If exposed tooth roots and their causes are left untreated, several oral health problems like root hypersensitivity, aesthetic or functional deficiencies, gum inflammation, tooth root caries and impaired oral hygiene can occur.\textsuperscript{19,20}

How can exposed tooth roots be treated?

It is important to address existing infections before surgical treatment. Your dentist will advise you on appropriate measures individually adapted for you.

Solution
Exposed tooth roots can often be treated with a suitable surgical approach. Your dentist will advise you on treatment individually adapted for you.
Biomaterials are scaffolds that can be implanted to replace or repair missing tissue.

Biomaterials, such as bone substitutes, collagen membranes and matrices, are used regularly in regenerative dentistry to support the body's own tissue regeneration process effectively.

**Geistlich Mucograft® for gum regeneration**

» A scaffold upon which your body can regenerate your own gums.

» Made of collagen obtained from healthy pigs.

» Winner of the Swiss IHZ-Innovation Award 2014: first product developed specifically for gum regeneration.
Back to a healthy smile

Post-operative care is an area where you can contribute to the success of your procedure.

Do’s
› Maintain your oral hygiene and use antibacterial mouth wash as prescribed by your dentist.
› Treat swelling with moist-cold pads.
› Consult your dentist regarding pain.
› Make sure that you visit your dentist for a follow-up appointment.

Don’ts
› Do not neglect your oral hygiene.
› Do not brush or floss at the site of surgery for 1 week after surgery.
   A toothbrush with especially soft bristles can usually be used for cleaning the teeth in the vicinity of the wound.
› Do not drink coffee or alcohol and do not smoke cigarettes for 2–3 days after surgery.
Biomaterials from Geistlich Pharma AG are the most frequently used materials in regenerative dental medicine throughout the world: 21

More than 15 million
**Geistlich Bio-Oss®**

More than 6.5 million
