Lost gum around teeth?
How to solve esthetical and sensitivity demands
Back to a healthy smile

Post-operative care is an area where you can contribute to the success of your procedure.

**Do's**

- Maintain your oral hygiene and use antibacterial mouth wash as prescribed by your dentist.
- Treat swelling with moist-cold pads.
- Consult your dentist regarding pain.
- Make sure that you visit your dentist for a follow-up appointment.

**Dont's**

- Do not neglect your oral hygiene.
- Do not brush or floss at the site of surgery for. A toothbrush with especially soft bristles can usually be used for cleaning the teeth in the vicinity of the wound.
- Do not drink coffee or alcohol and do not smoke cigarettes for 2–3 days after surgery.
- Do not interfere with the surgical wound, or with sutures.
Dental treatments are a matter of trust

Our experience and expertise is something you can rely on
Over 10 million patients worldwide have been treated with Geistlich biomaterials. Let us share some facts with you about these products:

› Geistlich products are scientifically proven top quality Swiss biomaterials.
› Meticulous selection of raw materials, together with a strictly controlled manufacturing process, allows Geistlich biomaterials to conform to high safety requirements and ensures high tolerability.

Geistlich Biomaterials
› Your worldwide no. 1 reference\(^1\)\(^2\)
› Outstanding quality\(^3\)\(^4\)
› Unique biofunctionality\(^5\)\(^6\)\(^7\)\(^8\)

These natural biomaterials were evaluated in more than 1,000 studies from countries all over the world.
› The safety has been assessed by international and national authorities.

Why is a treatment beneficial?

Smile again
Esthetically pleasing outcomes & maintenance of healthy teeth.

Less pain perception and analgetics intake
No harvesting of own tissue from the palate.\(^9\)

Less surgical chair time
With Geistlich Fibro-Gide\(^\text{®}\) the surgical chair time is reduced.\(^9\)

Initial situation before treatment
Exposed tooth root that causes several oral health problems e.g. root hypersensitivity and esthetic or functional deficiencies.

6 month after surgery
Restored function and esthetics by a completely covered tooth root with Geistlich Fibro-Gide\(^\text{®}\).

Prof. Zucchelli (Bologna, Italy)
What happens with exposed tooth roots?

If exposed tooth roots and their causes are left untreated, several oral health problems like root hypersensitivity, esthetic or functional deficiencies, gum inflammation, tooth root caries and impaired oral hygiene can occur.

How can exposed tooth roots be treated?

Covering the surgical site by mobilizing the flap upwards and suturing.

It is important to address existing infections before surgical treatment. Your dentist will advise you on appropriate measures individually adapted for you.

Solution

Exposed tooth roots can often be treated with a surgical approach. Your dentist will advise you on treatment individually adapted for you.
Human body possesses the ability to regenerate, in other words, to rebuild missing tissue. In most cases it still needs assistance through a scaffold which serves as a template. The natural Geistlich products support the body’s own tissue regeneration processes effectively.

**Geistlich Fibro-Gide® for gum thickness**

› A scaffold upon which your body can regenerate your own gums and its thickness.
› Made of collagen from healthy pigs.
› Winner of the KTI Swiss MedTech Award 2008: first collagen matrix designed for gaining gum thickness.¹⁰,¹¹
Biomaterials from Geistlich Pharma AG are the most frequently used materials in regenerative dental medicine throughout the world:

More than 10 million
